

EHR Patient Flow Screen

With its
unique
built-in
CHC func-
tionality;

Encite v3.3

easy, intuitive, graphics-based navi-
gation; clinician-oriented workflow;
and customizability the Chorus EHR
System is fast, flexible and represents
all that is possible in the transition
from paper to electronic records.

Unlike template-based EHR products, the Chorus EHR enables clinicians to navigate with the freedom of pen and paper using an open-ended workflow, intuitive graphical interface, and point-and-click functionality that makes it perfect for tablets or desktop PCs. So easy to use, many clinicians put it to use after only a single demonstration.

- Create patient histories and physical exam details with a few, simple clicks
- Drop-down lists anticipate descriptors and choices, and eliminate the "lost" feeling that accompanies use of many drop-down menus.
- Choose from past diagnoses or create a new plan that relates to more than one diagnosis.
- Prescribe medications the way you'd write a prescription and print, fax or send it electronically to the pharmacy.
- Record additional patient complaints with a few easy clicks that create a complete note.

Chorus has developed a uniquely superior EHR specifically for CHC use by listening and responding to CHC needs:

- Numerous patient data reports meet disease collaboration requirements.
- Create custom health maintenance schedules for any disease, patient population or longitudinal care directive.
- The datasets CHC rely on including Family Practice, Ob/Gyn, Pediatrics, Dental and Optometry and...coming soon Podiatry.

Chorus EHR is the finest product available for community health center use with development of more CHC-specific features underway including a single click UDS that draws information from across all components of the Total Technology Solution.
